[technical](#)

► This top rail has been designed to accommodate a sophisticated and strong picture hanging solution at the building or architectural stage. It is recessed into the ceiling, ideal where tracking needs to be hidden

► The extrusion is aluminium with strong weight capacity once set into existing joists

► The plasterboard is set over the rail with no protrusions. The rail comes in 2 and 3 meter lengths and is attached directly to ceiling joists or furring channels in fixed or suspended ceilings

► T-anchor stainless steel hangers can be inserted anywhere along the track (not available in nylon)
